Introduction

Product Description

The MB837-D25 is a small footprint single board computer that is configured with the Intel Atom processor D2550 and Intel® NM10 Chipset.

This 5.25-inch SBC provides greater flexibility for developers of embedded computing solutions. It is ideally suited for rugged and compact designs as in Internet devices and applications in automation, industrial control, data acquisition, thin client and other embedded PC applications.

MB837-D25 features the Intel's Graphics Media Accelerator, making it compatible with Windows Vista Premium. One DDR3 SO-DIMM on board implements up to 4GB of system memory. Four Gigabit LAN ports are also available.

Advanced connectivity and expansion interfaces are provided by one CF socket, one SATA-II, one Mini PCI, one Mini PCI-e and one USB 2.0.

MB837-D25 Features

- Supports 4 Intel® Gigabit LAN ports
- Supports D2550 at 1.86GHz processor
- DDR3 SO-DIMM x1, up to 4GB
- Mini-PCI slot x1
- Mini PCI-E slot x1 (USB signal only)
- Compact Flash socket
- Low power and Fanless, Aluminum enclosure
- LAN Bypass Enable/Disable pre-setting by BIOS (GPIO Control Mode) on Eth 1 & 2

Checklist

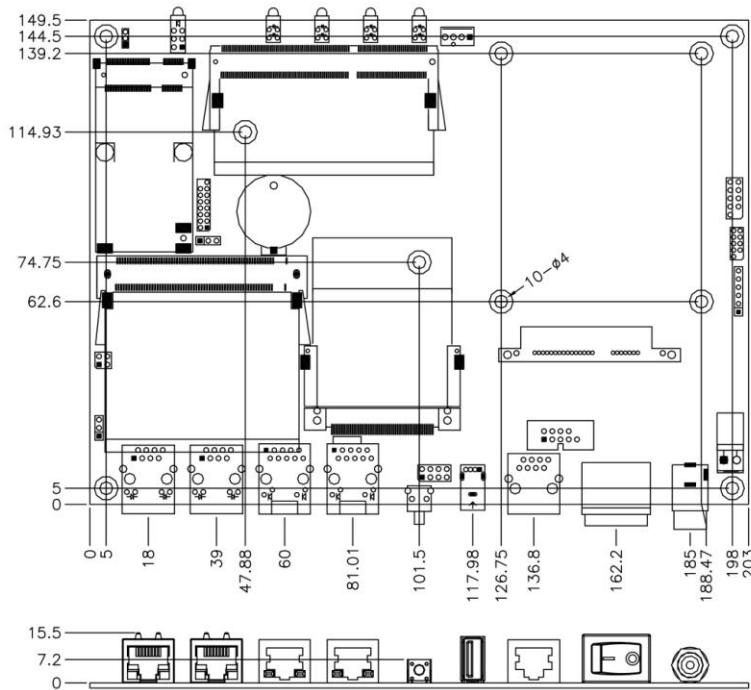

Your MB837-D25 package should include the items listed below.

- The MB837-D25 embedded board
- Driver DVD containing chipset drivers and flash memory utility
- Cables are optional.

MB837-D25 Specifications

Product Name	MB837-D25
Form Factor	5.25" Disk Size SBC
CPU Type	Intel "Cedar view" Processor, 32nm Bulk
Operating Frequency	Atom D2550 = 1.86 GHz [TDP= 10W], Cores = Dual Core
Chipset	Intel "Tiger Point" PCH, CG82NM10 [TDP = 2.1W, 130 nm]
BIOS	AMI BIOS w/ACPI
Ethernet controller	Intel 82583V PCI Express Gigabit ethernet controller x4
Memory	CPU on-die memory controller supporting up to 4GB One DDR3-1066/1333 SO-DIMM socket, Non-ECC, unbuffered
LAN	<ul style="list-style-type: none">Console: RS-232 @ RJ45Eth1, 2, 3 & 4: Intel 82583V @ RJ45 with LED
Network Bypass	One segment hardware Bypass (Eth1 & 2, Optional) Control by GPIO / Watchdog / Electrical Disconnect (Power Off)
Watchdog Timer	Yes (256 segments, 0, 1, 2...255 sec/min)
Storage	<ul style="list-style-type: none">Onboard CF Socket x122-pin SATA Right Angle Connector Onboard for 2.5" SSD x1
Rear Panel	<ul style="list-style-type: none">Cylindrical (Tip) Connector DC +12V inlet with Screw LockFactory Mode Restore Reset Switch (GPIO control)Power On / Off SwitchOptional opening for Wireless LAN antennaRJ45 x1 for ConsoleRJ45 with LED x4 for GLANUSB 2.0 x1
Front Panel	<ul style="list-style-type: none">LED: Power (Green) / Alarm (Red) / Status (Yellow)LAN Speed LED (Yellow / Green) x4LAN Link / Act LED (Green) x4
USB 2.0	USB 2.0 x4 <ul style="list-style-type: none">External x1[2x4] Pin header Onboard x1Mini PCI-e Socket x1 (USB Signal Only)
Video	VGA pin header onboard x1
LPC I/O	Nuvoton NCT6627UD: <ul style="list-style-type: none">RS-232 [2x5] Pin Header Onboard x1RJ45 Console x1KB/Mouse [1x6] Pin headerHardware monitorsFan Connector x1
Internal I/O Headers	<ul style="list-style-type: none">4-pin Smart Fan Connector x12-pin header for DC-in (12V) x1Keyboard + Mouse ([1x6] Pin Header) x1
Expansion Interface	<ul style="list-style-type: none">Mini PCI Socket x1Mini PCI-e Socket x1 (USB Signal Only)
Power Supply	Full range 40W Adapter / 12V (Optional)
Dimensions	203(W) x 149.5(D) mm
Operation Temperature	0 ~ 60 °C (32 ~ 140 °F)
Storage Temperature	-20 ~ 80 °C (-4 ~ 176 °F)

Board Dimensions

Installations

This section provides information on how to use the jumpers and connectors on the MB837-D25 in order to set up a workable system. The topics covered are:

Installing the Memory	6
Setting the Jumpers	7
Setting the Connectors	10

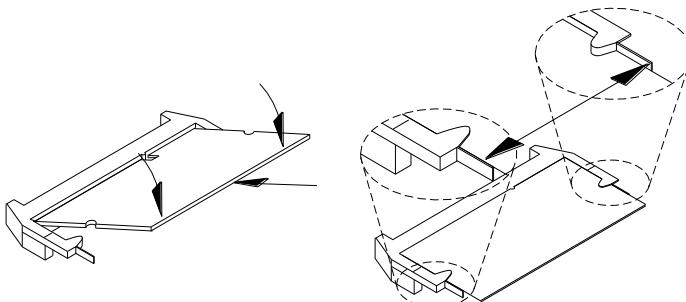

Installing the Memory

The MB837-D25 board supports one DDR3 memory socket that can support up to 4GB memory, DDR3 800/1066/1333 (w/o ECC function).

Installing and Removing Memory Modules

To install the DDR3 module, locate the memory slot on the board and perform the following steps:

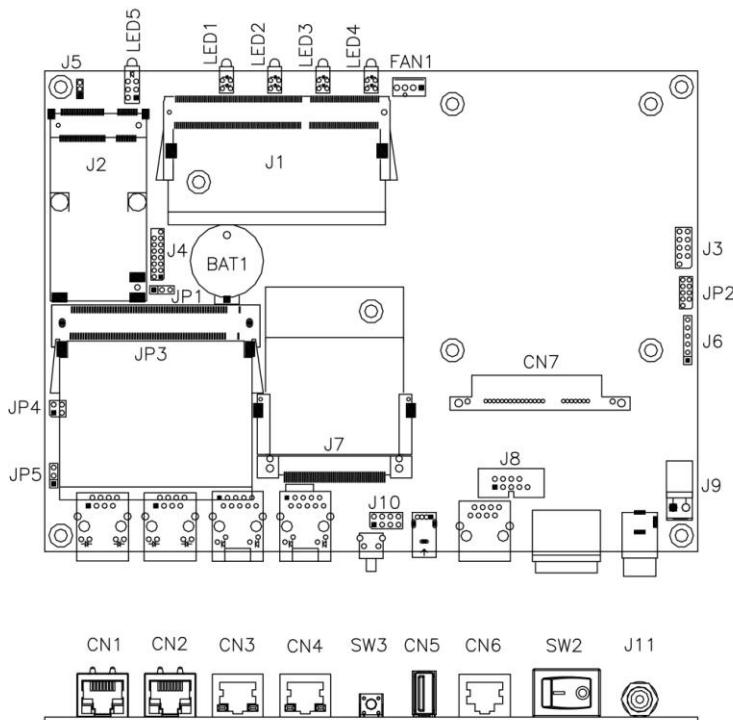

1. Hold the DDR3 module so that the key of the DDR3 module aligns with that on the memory slot. Insert the module into the socket at a slight angle (approximately 30 degrees). Note that the socket and module are both keyed, which means that the module can be installed only in one direction.
2. To seat the memory module into the socket, apply firm and even pressure to each end of the module until you feel it slip down into the socket.
3. With the module properly seated in the socket, rotate the module downward. Continue pressing downward until the clips at each end lock into position.
4. To remove the DDR3 module, press the clips with both hands.

Setting the Jumpers

Jumpers are used on MB837-D25 to select various settings and features according to your needs and applications. Contact your supplier if you have doubts about the best configuration for your needs. The following lists the connectors on MB837-D25 and their respective functions.

Jumper and Connector Locations on MB837-D25	8
JP1: Clear CMOS Contents	9
JP4, JP5: LAN Bypass & WDT Reboot Setting	9

Jumper and Connector Locations on MB837-D25

Jumper and Connector Locations on MB837-D25.....	8
JP1: Clear CMOS Contents.....	9
JP4, JP5: LAN Bypass & WDT Reboot Setting	9

JP1: Clear CMOS Contents

Use JP1 to clear the CMOS contents.

Note that the power connector or jack should be disconnected from the board before clearing CMOS.

JP1	Setting	Function
	Pin 1-2 Short/Closed	Normal
	Pin 2-3 Short/Closed	Clear CMOS

JP4, JP5: LAN Bypass & WDT Reboot Setting

JP4 JP5	Setting	Function	Power OFF		Power ON		Power ON OS run software	
			Normal	Bypass	Normal	Bypass	Normal	Bypass
 JP4 1-2 & 3-4 Open  JP5 1-2 Closed	JP4 1-2 & 3-4 Open JP5 1-2 Closed	LAN bypass upon the time out of WDT.	✓		✓			✓
 JP4 1-2 & 3-4 Closed  JP5 1-2 Closed	JP4 1-2 & 3-4 Closed JP5 1-2 Closed	System will reboot upon the time out of WDT.		✓		✓	LAN Always Bypass	WDT Reboot System
 JP4 3-4 Closed 1-2 Open  JP5 1-2 Closed	JP4 3-4 Closed 1-2 Open JP5 1-2 Closed	LAN bypass & system reboot upon the time out of WDT.	✓		✓		LAN Always Normal	WDT Reboot System
 JP4 1-2 & 3-4 Open  JP5 2-3 Closed	JP4 1-2 & 3-4 Open JP5 2-3 Closed	LAN bypass controlled by Super IO GP54 or setting in BIOS.	BIOS Setting ** GP54 Active: Low: Bypass High: Normal					

** Note that the Bypass setting in BIOS is only working when JP4 & JP5 are set as this configuration.

Setting the Connectors

FAN1: System Fan Power Connector	11
CN1, CN2, CN3, CN4: 10 / 100 / 1000 LAN Ports	11
CN5: USB Connector	11
CN6: COM1 RJ45 Connector	11
CN7: SATA HDD Dock	12
J1: SO-DIMM DDR3 Socket	12
J2: Mini PCI-e Connector (USB signal only)	12
J3: SPI Debug Port (Factory use only)	12
J4: VGA Header	12
J7: Slim Type II Compact Flash Connector	13
J8: COM2 Serial Port	13
J9: AT_12V Connector	13
J10: USB Header	13
J11: DC Power Jack (+12V only)	14
LED1, LED2, LED3 & LED4: LAN Port Link, Active LEDs	14
LED5: Power, Alarm & Status LEDs	14
SW3: Software Reset Button	14
SW2: Power Switch	14
JP3: Mini-PCI Connector	14

FAN1: System Fan Power Connector

FAN1 is 4-pin header for System fan power. The fan must be a 12V fan.

Pin #	Signal Name
1	Ground
2	+12V
3	Rotation detection
4	Control

CN1, CN2, CN3, CN4: 10 / 100 / 1000 LAN Ports**CN5: USB Connector****CN6: COM1 RJ45 Connector**

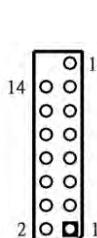

Pin #	Signal Name (RS-232)
1	RTS, Request to send
2	DTR, Data terminal ready
3	TXD, Transmit data
4	Ground
5	Ground
6	RXD, Receive data
7	DSR, Data set ready
8	CTS, Clear to send

CN7: SATA HDD Dock

The SATA HDD dock combines a SATA power connector and a SATA interface connector.

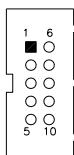

Signal Name	Pin #	Pin #	Signal Name
GND	S1	P1	+3.3V
A+	S2	P2	+3.3V
A-	S3	P3	+3.3V
GND	S4	P4	GND
B+	S5	P5	GND
B-	S6	P6	GND
GND	S7	P7	+5V
		P8	+5V
		P9	+5V
		P10	GND
		P11	GND
		P12	GND
		P13	+12V
		P14	+12V
		P15	+12V

J1: SO-DIMM DDR3 Socket**J2: Mini PCI-e Connector (USB signal only)****J3: SPI Debug Port (Factory use only)****J4: VGA Header**

Signal Name	Pin #	Pin #	Signal Name

DACG	3	4	GND
DACB	5	6	NC
NC	7	8	CRT_SPD
GND	9	10	HSYNC_C
+5VCRT	11	12	VSYNC_C
GND	13	14	CRT_SPCLK
GND	15		

J6:PS2 KB/MS Header

Pin #	Signal Name
1	KBDATA
2	KBCLK
3	MSDATA
4	MSCLK
5	GND
6	+5V

J7: Slim Type II Compact Flash Connector**J8: COM2 Serial Port**

Pin #	Signal Name (RS-232)
1	DCD, Data carrier detect
2	RXD, Receive data
3	TXD, Transmit data
4	DTR, Data terminal ready
5	Ground
6	DSR, Data set ready
7	RTS, Request to send
8	CTS, Clear to send
9	RI, Ring indicator
10	No Connect.

J9: AT_12V Connector

J9 is a DC-in internal connector supporting +12V.

Pin #	Signal Name
1	+12V
2	Ground

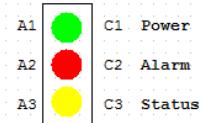

Note: Do not connect J9 and J11 at the same time.

J10: USB Header

Signal Name	Pin #	Pin #	Signal Name
VCC	1	2	Ground
USB1-	3	4	USB2+
USB1+	5	6	USB2-
Ground	7	8	VCC

J11: DC Power Jack (+12V only)

Note: Do not connect J9 and J11 at the same time.

LED1, LED2, LED3 & LED4: LAN Port Link, Active LEDs**LED5: Power, Alarm & Status LEDs**

Signal Name	Pin #	Pin #	Signal Name
PWR LED+	A1	C1	PWR LED-
ALARM LED+	A2	C2	SIO GPIO55
STATUS LED+	A3	C3	SIO GPIO56

SW3: Software Reset Button

Signal Name	Pin #	Pin #	Signal Name
GND	1	2	PCH GPIO7

Note: SW3 is controlled by GPIO only.

SW2: Power Switch**JP3: Mini-PCI Connector**

BIOS Setup

This chapter describes the different settings available in the AMI BIOS that comes with the board. The topics covered in this chapter are as follows:

BIOS Introduction	16
BIOS Setup	16
Advanced Settings	18
Chipset Settings	27
Security Settings	33
Save & Exit Settings	34

BIOS Introduction

The BIOS (Basic Input/Output System) installed in your computer system's ROM supports Intel processors. The BIOS provides critical low-level support for a standard device such as disk drives, serial ports and parallel ports. It also password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system.

BIOS Setup

The BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility. When you turn on the computer, the BIOS is immediately activated. Pressing the key immediately allows you to enter the Setup utility. If you are a little bit late pressing the key, POST (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup. If you still wish to enter Setup, restart the system by pressing the "Reset" button or simultaneously pressing the <Ctrl>, <Alt> and <Delete> keys. You can also restart by turning the system Off and back On again. The following message will appear on the screen:

Press to Enter Setup

In general, you press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help and <Esc> to quit.

When you enter the Setup utility, the Main Menu screen will appear on the screen. The Main Menu allows you to select from various setup functions and exit choices.

Warning: *It is strongly recommended that you avoid making any changes to the chipset defaults. These defaults have been carefully chosen by both AMI and your system manufacturer to provide the absolute maximum performance and reliability. Changing the defaults could cause the system to become unstable and crash in some cases.*

System Date

Set the Date. Use Tab to switch between Data elements.

System Time

Set the Time. Use Tab to switch between Data elements.

Advanced Settings

This section allows you to configure and improve your system and allows you to set up some system features according to your preference.

Aptio Setup Utility					
Main	Advanced	Chipset	Boot	Security	Save & Exit
Legacy OpROM Support					
Launch PXE OpROM				Disabled

Hyper-Threading		Supported			+- Change Field
Hyper-Threading		Enabled			F1: General Help
Execute Disable Bit		Enabled			F2: Previous Values
Limit CPUID Maximum		Disabled			F3: Optimized Default
					F4: Save ESC: Exit

Hyper-threading

Enabled for Windows XP and Linux (OS optimized for Hyper-Threading Technology) and Disabled for other OS (OS not optimized for Hyper-Threading Technology). When Disabled, only one thread per enabled core is enabled.

Execute Disable Bit

XD can prevent certain classes of malicious buffer overflow attacks when combined with a supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, Red Hat Enterprise 3 Update 3.)

Limit CPUID Maximum

Disabled for Windows XP.

IDE Configuration

Aptio Setup Utility					
Main	Advanced	Chipset	Boot	Security	Save & Exit

Legacy USB Support	Enabled				
EHCI Hand-off	Enabled				
USB hardware delays and time-outs:					
USB Transfer time-out	20 sec				
Device reset time-out	20 sec				
Device power-up delay	AUTO				

Legacy USB Support

Enables Legacy USB support.

AUTO option disables legacy support if no USB devices are connected.

DISABLE option will keep USB devices available only for EFI applications.

EHCI Hand-off

Enabled/Disabled. This is a workaround for OSes without EHCI hand-off support. The EHCI ownership change should be claimed by EHCI driver.

USB Transfer time-out

The time-out value for Control, Bulk, and Interrupt transfers.

Device reset time-out

USB mass Storage device start Unit command time-out.

Device power-up delay

Maximum time the device will take before it properly reports itself to the Host Controller. ‘Auto’ uses default value: for a Root port it is 100ms, for a Hub port the delay is taken from Hub descriptor.

65535(0xFFFF) means indefinite waiting.

Bootup NumLock State

Select the keyboard NumLock state.

Quiet Boot

Enables/Disables Quiet Boot option.

Fast Boot

Enables/Disables boot with initialization of a minimal set of devices to launch active boot option. Has no effect for BBS boot options.

GateA20 Active

UPON REQUEST – GA20 can be disabled using BIOS services.
ALWAYS – do not allow disabling GA20; this option is useful when any RT code is executed above 1MB.

Option ROM Messages

Set display mode. Options: Force BIOS and Keep Current.

Interrupt 19 Capture

Enable: Allows Option ROMs to trap Int 19.

CSM Support

Enables/Disables/Auto CSM Support.

Boot Option Priorities

Sets the system boot order.

Security Settings

This section allows you to configure and improve your system and allows you to set up some system features according to your preference.

Aptio Setup Utility									
Main	Advanced	Chipset	Boot	Security	Save & Exit				
Password Description									
<p>If ONLY the Administrator's password is set, then this only limits access to Setup and is only asked for when entering Setup.</p> <p>If ONLY the User's password is set, then this is a power on password and must be entered to boot or enter Setup. In Setup the User will have Administrator rights.</p> <p>The password length must be in the following range:</p> <table><tr><td>Minimum length</td><td>3</td></tr><tr><td>Maximum length</td><td>20</td></tr></table>					Minimum length	3	Maximum length	20	<p>→ ← Select Screen ↑ ↓ Select Item Enter: Select +- Change Field F1: General Help F2: Previous Values F3: Optimized Default F4: Save ESC: Exit</p>
Minimum length	3								
Maximum length	20								

Administrator Password

Set Setup Administrator Password.

User Password

Set User Password.

Save & Exit Settings

Aptio Setup Utility					
Main	Advanced	Chipset	Boot	Security	Save & Exit
Save Changes and Exit					→ ← Select Screen ↑ ↓ Select Item Enter: Select +- Change Field F1: General Help F2: Previous Values F3: Optimized Default F4: Save ESC: Exit
Discard Changes and Exit					
Save Changes and Reset					
Discard Changes and Reset					
Save Options					
Save Changes					
Discard Changes					
Restore Defaults					
Save as User Defaults					
Restore User Defaults					
Boot Override					

Save Changes and Exit

Exit system setup after saving the changes.

Discard Changes and Exit

Exit system setup without saving any changes.

Save Changes and Reset

Reset the system after saving the changes.

Discard Changes and Reset

Reset system setup without saving any changes.

Save Changes

Save Changes done so far to any of the setup options.

Discard Changes

Discard Changes done so far to any of the setup options.

Restore Defaults

Restore/Load Defaults values for all the setup options.

Save as User Defaults

Save the changes done so far as User Defaults.

Restore User Defaults

Restore the User Defaults to all the setup options.

Boot Override

Pressing ENTER causes the system to enter the OS.

This page is intentionally left blank.

Drivers Installation

This section describes the installation procedures for software and drivers. The software and drivers are included with the motherboard. If you find the items missing, please contact the vendor where you made the purchase. The contents of this section include the following:

Intel Chipset Software Installation Utility	38
VGA Drivers Installation.....	39
LAN Drivers Installation	41

IMPORTANT NOTE:

After installing your Windows operating system, you must install first the Intel Chipset Software Installation Utility before proceeding with the drivers installation.

Intel Chipset Software Installation Utility

The Intel Chipset Drivers should be installed first before the software drivers to enable Plug & Play INF support for Intel chipset components. Follow the instructions below to complete the installation.

1. Insert the disc that comes with the board. Click **Intel** and then **Intel(R) Cedarview Chipset Drivers**.

2. Click **Intel(R) Chipset Software Installation Utility**.

3. When the Welcome screen to the Intel® Chipset Device Software appears, click **Next** to continue.

4. Click **Yes** to accept the software license agreement and proceed with the installation process.

5. On the Readme File Information screen, click **Next** to continue the installation.

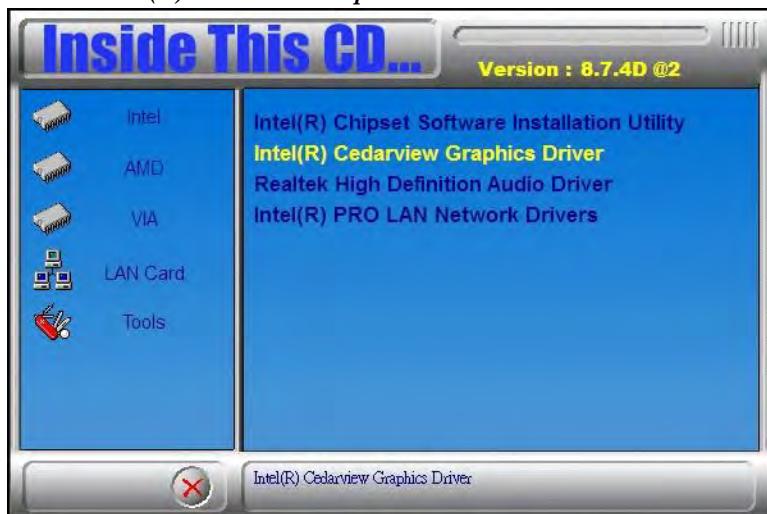

6. The Setup process is now complete. Click **Finish** to restart the computer and for changes to take effect.

VGA Drivers Installation

1. Insert the disc that comes with the board. Click **Intel** and then **Intel(R) Cedarview Chipset Drivers**.

2. Click **Intel(R) Cedarview Graphics Driver**.

3. When the Welcome screen appears, click **Next** to continue.

4. Click **Yes** to agree with the license agreement and continue the installation.

5. On the Readme File Information screen, click **Next** to continue the installation of the Intel® Graphics Media Accelerator Driver.

6. On Setup Progress screen, click **Next** to continue.

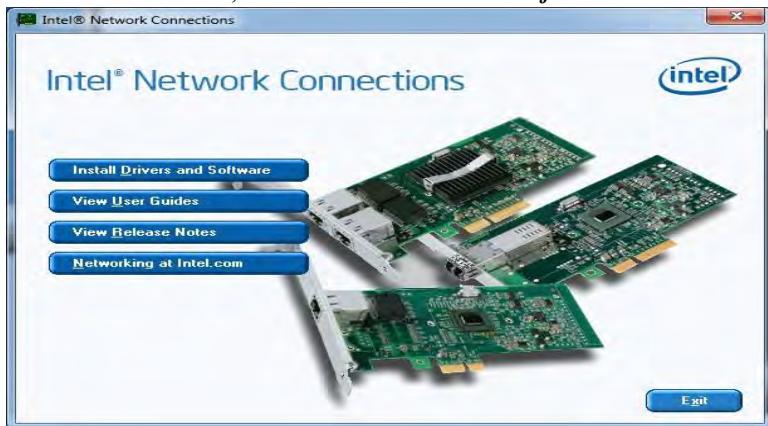

7. Setup complete. Click **Finish** to restart the computer and for changes to take effect.

LAN Drivers Installation

1. Insert the disc that comes with the board. Click **LAN Card** and then **Intel LAN Cedarview Drivers**.

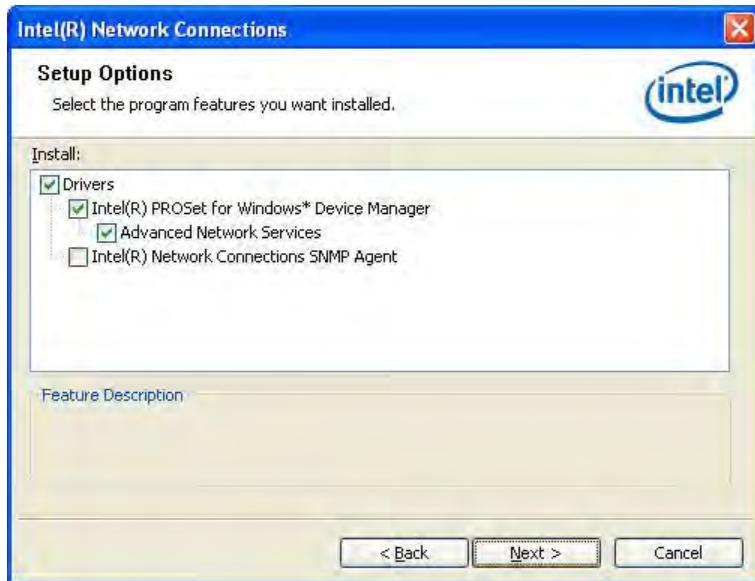

2. On the next screen, click **Install Drivers and Software**.

3. In the Welcome screen, click **Next**. On the next screen, click **Yes** to to agree with the license agreement.
4. Agree with the license agreement and click **Next**.

DRIVERS INSTALLATION

5. Click the checkbox for **Drivers** in the Setup Options screen to select it and click **Next** to continue.

6. The wizard is ready to begin installation. Click **Install** to begin the installation.

7. When InstallShield Wizard is complete, click **Finish**.

Appendix

A. I/O Port Address Map

Each peripheral device in the system is assigned a set of I/O port addresses which also becomes the identity of the device. The following table lists the I/O port addresses used.

Address	Device Description
000h - 01Fh	DMA Controller #1
020h - 03Fh	Interrupt Controller #1
040h - 05Fh	Timer
060h - 06Fh	Keyboard Controller
070h - 07Fh	Real Time Clock, NMI
080h - 09Fh	DMA Page Register
0A0h - 0BFh	Interrupt Controller #2
0C0h - 0DFh	DMA Controller #2
0F0h	Clear Math Coprocessor Busy Signal
0F1h	Reset Math Coprocessor
1F0h - 1F7h	IDE Interface
2F8h - 2FFh	Serial Port #2(COM2)
2B0h- 2DFh	Graphics adapter Controller
360h - 36Fh	Network Ports
3F8h - 3FFh	Serial Port #1(COM1)

B. Interrupt Request Lines (IRQ)

Peripheral devices use interrupt request lines to notify CPU for the service required. The following table shows the IRQ used by the devices on board.

Level	Function
IRQ 0	System timer
IRQ 1	Standard PS/2 Keyboard
IRQ 3	Communications Port (COM2)
IRQ 4	Communications Port (COM1)
IRQ 5	Communications Port (COM3)
IRQ 7	Communications Port (COM4)
IRQ 8	System CMOS/real time clock
IRQ 11	Intel(R) N10/ICH7 Family SMBus Controller - 27DA
IRQ 12	Microsoft PS/2 Mouse
IRQ 13	Numeric data processor
IRQ 16	Intel(R) N10/ICH7 Family USB Universal Host Controller - 27CB
IRQ 18	Intel(R) N10/ICH7 Family USB Universal Host Controller - 27CA
IRQ 19	Intel(R) N10/ICH7 Family Serial ATA Storage Controller - 27C0
IRQ 19	Intel(R) N10/ICH7 Family USB Universal Host Controller - 27C9
IRQ 22	High Definition Audio Controller
IRQ 23	Intel(R) N10/ICH7 Family USB2 Enhanced Host Controller - 27CC
IRQ 23	Intel(R) N10/ICH7 Family USB Universal Host Controller - 27C8
IRQ 4294967290	Intel(R) 82583V Gigabit Network Connection
IRQ 4294967291	Intel(R) 82583V Gigabit Network Connection #2
IRQ 4294967292	Intel(R) Graphics Media Accelerator 3600 Series
IRQ 4294967293	Intel(R) N10/ICH7 Family PCI Express Root Port - 27D2
IRQ 4294967294	Intel(R) N10/ICH7 Family PCI Express Root Port - 27D0

C. Watchdog Timer Configuration

The WDT is used to generate a variety of output signals after a user programmable count. The WDT is suitable for use in the prevention of system lock-up, such as when software becomes trapped in a deadlock. Under these sorts of circumstances, the timer will count to zero and the selected outputs will be driven. Under normal circumstance, the user will restart the WDT at regular intervals before the timer counts to zero.
